AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently amended) A system for pre-allocating at least one resource, comprising:
 - an allocator ~~adapted to that~~ pre-allocates the at least one resource;
 - an identifier ~~adapted to that~~ determines whether a consumer utilizing the at least one resource is a registering consumer or a registered consumer;
 - an associator ~~adapted to that~~ associates the at least one pre-allocated resource with a first resource manager, the first resource manager operable to manage the at least one pre-allocated resource for the registering consumer; and
 - a router ~~adapted to that~~ routes a request requiring access to the at least one resource associated with the registering consumer to the first resource manager.
2. (Currently amended) The system of claim 1, ~~wherein~~ the at least one resource is allocated to a consumer registering to use an application.
3. (Currently amended) The system of claim 2, ~~wherein~~ the application is available over a network.
4. (Currently amended) The system of claim 3, ~~wherein~~ the network is the Internet.
5. (Currently amended) The system of claim 1, ~~wherein~~ the at least one resource is allocated to a consumer registering to use a service.
6. (Currently amended) The system of claim 5, ~~wherein~~ the service is available over the Internet.

MS160207.01/MSFTP182US

7. (Currently amended) The system of claim 1, ~~wherein~~ the identifier is a computer process.
8. (Currently amended) The system of claim 1, ~~wherein~~ the associator is a computer process.
9. (Currently amended) The system of claim 1, ~~wherein~~ the router is a computer process.
10. (Original) The system of claim 1, the identifier operable to receive Hypertext Transfer Protocol (HTTP) requests.
11. (Currently amended) The system of claim 10, ~~wherein~~ the identifier distinguishes consumer requests by examining at least part of a persistent client side hypertext file (cookie).
12. (Currently amended) The system of claim 1, ~~wherein~~ the associator records association information concerning an association between the at least one resource and the first resource manager in one or more data structures.
13. (Currently amended) The system of claim 12, ~~wherein~~ the one or more data structures include at least one of, a table, an array, a list, a tree, a linked list, a hash and a heap.
14. (Currently amended) The system of claim 12, ~~wherein~~ the one or more data structures contain a mapping between the at least one resource and the first resource manager.

MS160207.01/MSFTP182US

15. (Currently amended) The system of claim 1, ~~wherein~~ the associator records association information concerning an association between the at least one resource and the first resource manager in one or more databases.
16. (Currently amended) The system of claim 15, ~~wherein~~ the one or more databases contain a mapping between the at least one resource and the first resource manager.
17. (Currently amended) The system of claim 1, ~~wherein~~ the router accesses one or more data structures containing routing information that facilitates routing the request associated with the registering consumer to the first resource manager.
18. (Currently amended) The system of claim 17, ~~wherein~~ the one or more data structures include at least one of, a table, an array, a list, a tree, a linked list, a hash and a heap.
19. (Currently amended) The system of claim 18, ~~wherein~~ the one or more data structures contain one or more mappings for one or more consumers to one or more resource managers.
20. (Currently amended) The system of claim 1, ~~wherein~~ the router accesses one or more databases containing information that facilitates routing the request associated with the registering consumer to the first resource manager.
21. (Currently amended) The system of claim 20, ~~wherein~~ the one or more databases contain one or more mappings for one or more consumers to one or more resource managers.
22. (Previously presented) A computer readable medium storing computer executable components to effect the system of claim 1.
23. (Original) A method for processing requests from a registering consumer,

09/770,056

MS160207.01/MSFTP182US

comprising:

pre-allocating one or more resources for one or more registering consumers;

associating one or more of the pre-allocated resources with a first resource managing component, the first resource managing component operable to manage the one or more pre-allocated resources for the registering consumer;

associating the registering consumer with the first resource managing component; and

routing a request from the registering consumer that requires access to a resource to the first resource managing component.

24. (Currently amended) The method of claim 23, ~~wherein~~ data associated with a registering consumer is replicated to one or more resource managers.

25. (Currently amended) The method of claim 23, ~~wherein~~ the request requiring access to the resource is not necessarily routed to the first resource manager if the data associated with registering consumer has been replicated to one or more resource managers, the request being routable to the one or more resource managers to which the data has been replicated.

26. (Currently amended) The method of claim 23, ~~wherein~~ the request requiring access to the resource is an HTTP request.

27. (Currently amended) The method of claim 23, ~~wherein~~ the registering consumer is registering to use at least one of an application and a service.

28. (Original) The method of claim 27, the application being available over the Internet.

29. (Original) The method of claim 27, the service being available over the Internet.

09/770,056

MS160207.01/MSFTP182US

30. (Previously presented) A computer readable medium having stored thereon computer executable instructions for carrying out the method of claim 23.

31. (Currently amended) A data packet adapted to be transmitted between two or more computer processes, the data packet comprising:

information concerning pre-allocating one or more resources for access by one or more registering consumers, the information including at least one of: a resource type; a resource name; a resource capacity; a resource location; a resource availability; an association between a resource and a resource managing component; ~~and an association between a resource managing component and the registering consumer, the association between the resource managing component and the registering consumer operative to attract at least one registering consumer request routed from at least one resource not associated with the registering consumer.~~

32. (Original) A system for pre-allocating at least one resource, comprising:

means for pre-allocating the at least one resource for consumption by a consumer;

means for determining whether data concerning the consumer has been

replicated to one or more resource managing components;

means for associating the at least one pre-allocated resource with a first resource managing component, where the first resource managing component manages the at least one pre-allocated resource for the consumer before the data concerning the consumer has been replicated to the one or more resource managing components; and

means for routing a request generated by the consumer, for whom data has not been replicated to the one or more resource managing components, to the first resource managing component.
